OpenDV-HCI: standardizing dependent variables turns fragmented open datasets into comparable, synthesizable evidence

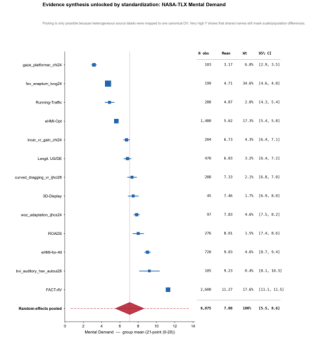

(a) DV coverage across 23 datasets

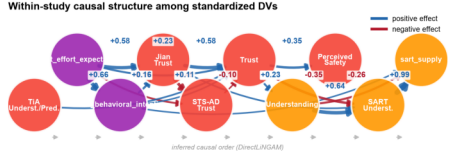

(b) Pairwise overlap (Jaccard)

(c) Meta-analysis: Mental Demand

(d) Cross-study causal structure

DirectLiNGAM on within-study z-scores (complete-case on the largest co-observed DV set; n = 2,600 obs; all rows from one study (FACT-AV), i.e. a within-study DAG). Edge weights are structural coefficients.
