Evidence synthesis unlocked by standardization: NASA-TLX Mental Demand

Pooling is only possible because heterogeneous source labels were mapped to one canonical DV (curated mappings only; LLM-mapped columns left out).
Very high I² shows that shared names still mask scale/population differences.

Random-effects (DerSimonian–Laird), k = 19 studies. Heterogeneity: I^2 = 99.7%, τ^2 = 14.64, Q(18) = 6488, p < 0.001
Hartung–Knapp–Sidik–Jonkman 95% CI (t, 18 df): [6.8, 9.5]
